Internal Research Note RN-2026-014

Cross-trial comparison of SGLT2 inhibitors in older adults
Author: Dr. Fernandes, Clinical Pharmacology
Status: Draft

Pooled analysis suggests Velotrin has a larger HbA1c reduction in patients with baseline HbA1c above 8.5%. Genital mycotic infections were more common in female patients. Recommend monitoring eGFR at weeks 4 and 12 in patients over 65. Open question: interaction with loop diuretics when co-prescribed with Renalix.

Follow-up actions: (1) update the evidence table, (2) discuss at the monthly journal club, (3) log new external references.
