Internal Research Note RN-2026-040

Search protocol for living literature review
Author: Library & Evidence Services
Status: Draft

Searches should cover the internal trial repository first, then external sources for publications newer than the most recent internal document. Record query, date, and number of hits. Prefer randomised trials and meta-analyses; label case reports as low-certainty evidence.

Follow-up actions: (1) update the evidence table, (2) discuss at the monthly journal club, (3) log new external references.
